THE PROBLEM

Children learn through movement. Software keeps them sitting still.

Kids learn by moving

Active, embodied play is how young children absorb literacy, numeracy and motor skills.

Screens sit them down

Most educational apps are tap-and-swipe, passive screen time that fights how kids learn.

Movement tech is costly

Existing movement-learning tools demand expensive hardware, specialist kit or complex setup.

THE SOLUTION

Any webcam becomes a learning interface.

Children use a finger through the camera to trace, spell, count and build. No controller, no touchscreen.

T Literacy

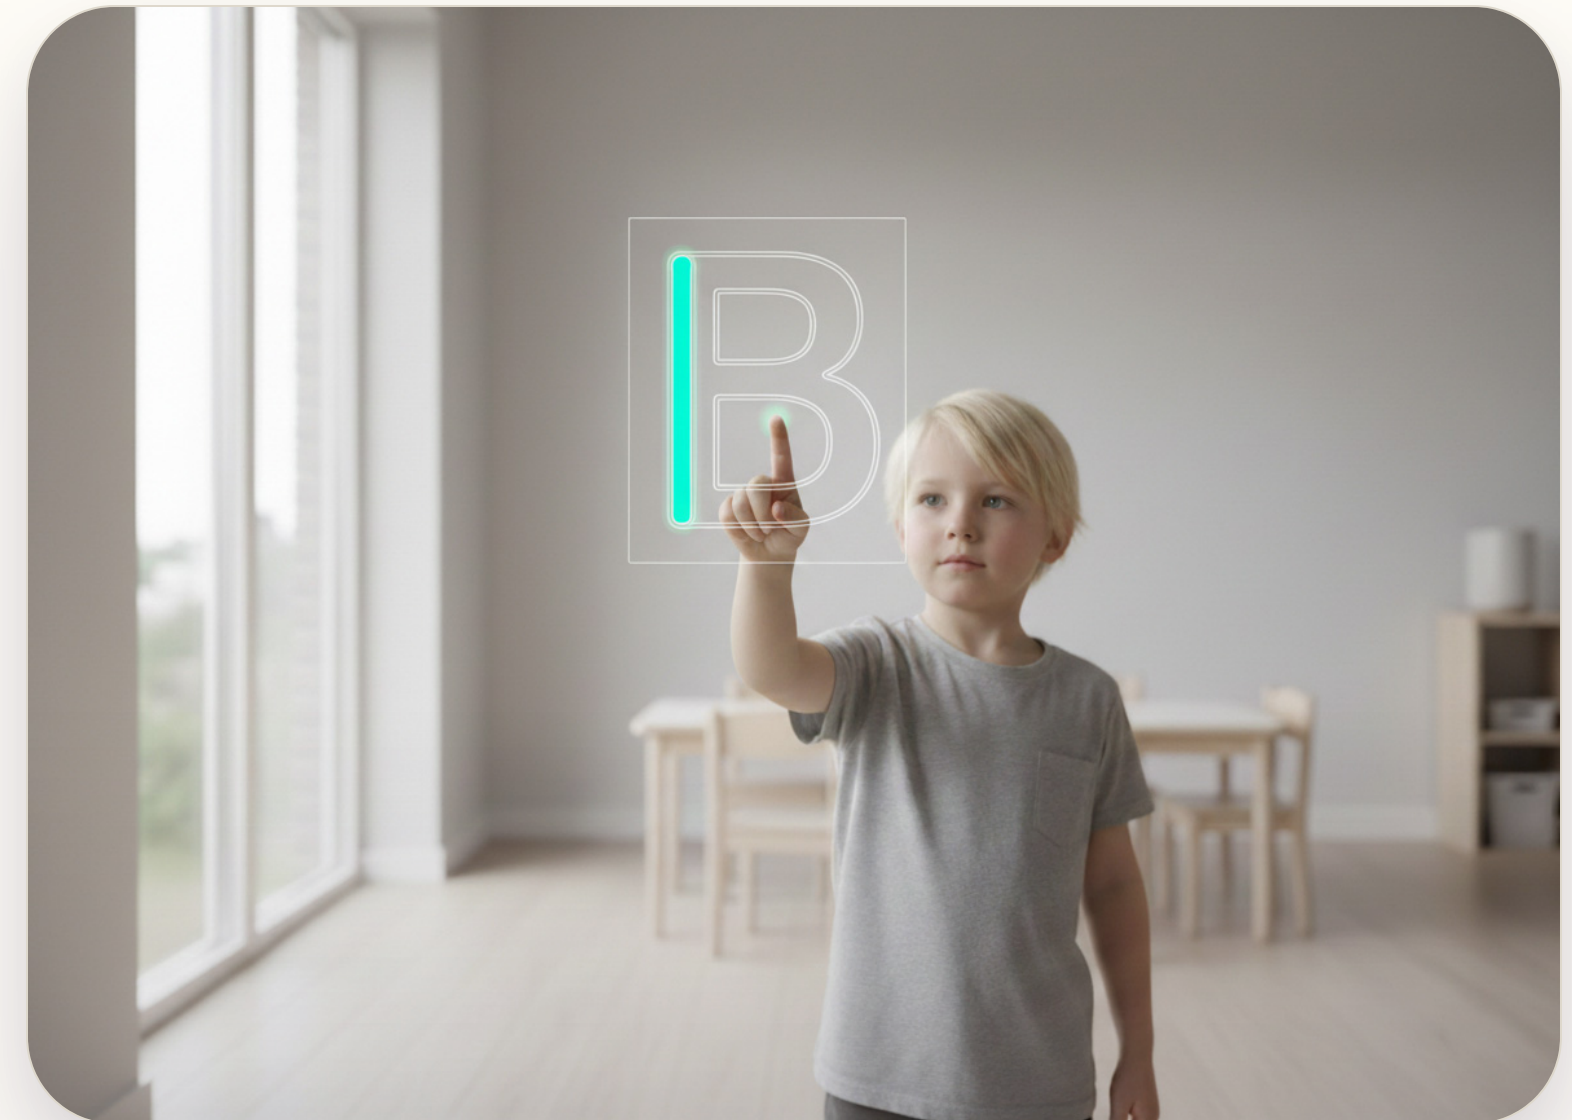

Numeracy

✦ Spelling

✋ Motor skills

On-device hand tracking. Nothing ever leaves the browser.

No hardware

No installation

Works in any browser

Five ways children learn by moving

Tracing

Trace letters A–Z and numbers 0–9 in the air.

Spelling Stars

Form letters by hand to spell words and earn stars.

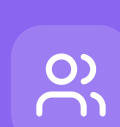

Balloon Math

Pop the balloon with the right answer.

Sort & Place

Move shapes and objects into the right place.

Classroom Mode

Live, teacher-led play for the whole class.

TRACTION

Real usage, not a prototype.

● TRACKING SUCCESS

95.5%

Share of gesture attempts the camera read cleanly across the pilot.

WHY NOW

The timing has arrived

Computer vision is ready

Browser-grade hand tracking is now fast, accurate and free to run on-device.

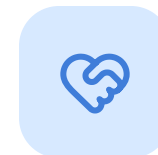

Chromebooks are everywhere

Webcams and browsers are already in classrooms and homes, with no new hardware to buy.

Schools want active learning

Movement and embodied learning are a rising priority in early-years education.

Parents want alternatives

Families are actively seeking healthy alternatives to passive screen time.

MARKET

Global early-years education, ages 3–7

One product, five buyers. Every place a young child learns already has a webcam.

Schools

Parents

Tutors

After-school clubs

Districts

Ages 3–7 is the wedge. The same engine extends up through primary literacy and numeracy.

Multiple paths to revenue

	School subscriptions	Recurring per-school plans for whole-class use.
	Classroom licences	Per-classroom seats for individual teachers.
	Parent subscriptions	Direct-to-family plans for home learning.
	District licences	Bulk deployment across a district or trust.
	Curriculum partnerships	Co-branded content with education partners.

FOUNDER

Justin Ukaegbu

Designer · Product builder · AI-native founder

Designed, built and launched the entire platform solo, from the computer-vision engine and the learning games to the school pilot, billing and infrastructure.
