

Draw in the Air

Safety & Privacy at a Glance · A brief for Lagos school leaders and Data Protection Officers

What it is

A browser-based early-years learning platform. Children practise letters, numbers, shapes and pre-writing by moving a hand in front of a webcam — no touch, no pencil, no shared device. Runs on any modern laptop or tablet with a camera. Nothing to install.

What it is not

Not a social network. Not a video-storage service. Not an AI camera. No chat, no leaderboards, no child-to-child contact, no advertising, and no data sold to third parties — ever.

Privacy by design

Concern	How Draw in the Air handles it
Camera video	Processed locally in the browser by Google's open-source MediaPipe library. Frames never uploaded, never stored, never sent off-device.
Personal data on a child	A nickname (or just an emoji avatar) and an age band (4–5, 6–7, 8–9). No full names, dates of birth, photos, phone numbers, school names attached to a child, or biometric data.
Identifiability	Each learner is a randomly generated pseudonymous ID. Analytics groups smaller than 5 children are suppressed automatically (k-anonymity).
Hosting	EU-based infrastructure (Supabase). Data does not transit through ad networks.
Tracking and ads	No behavioural advertising. No tracking cookies for child sessions. Permissions-Policy disables microphone, geolocation, and ad-tech cohorts at the browser level.
Parental control	Parents can view, export, or delete every record from a self-service account page. Consent can be withdrawn at any time.

Built-in safety mechanics

- **Adult Gate** — exiting an activity or settings requires a 2-second press-and-hold a young child will not perform by accident.
- **No external links** in child mode. A child cannot navigate out of the learning surface.
- **No chat, no messaging, no social sharing** from a child account.
- **HTTPS enforced** on every page, with HSTS preloading.
- **Camera permission scoped** to the Draw in the Air origin only.

Compliance posture

Draw in the Air is engineered to the principles of:

- **Nigeria Data Protection Act 2023 (NDPA)** and the General Application & Implementation Directive 2025 (GAID).
- **GDPR** (EU 2016/679), the global benchmark for personal-data protection.
- **UK Data Protection Act 2018** principles.
- **COPPA** (US Children's Online Privacy Protection Act) principles — no personal information collected from children under 13 without verifiable parental consent.

For each pilot school, Draw in the Air operates as a **data processor**, the school remains the **data controller**, and a standard data-processing agreement is signed before any data is collected. The pilot is reviewed against the school's Data Protection Compliance Organisation (DPCO) requirements before live-fire.

Technical safety controls (summary)

Layer	Control
Application	OWASP Top 10 audit completed May 2026; remediation roadmap active. Input validation, output encoding, no dangerouslySetInnerHTML.
Authentication	Parent accounts via Supabase (email + password OR Google sign-in). No child accounts.
Authorisation	Postgres Row-Level Security — every child record is locked to the owning parent's authenticated user ID via the <code>auth_owns_child()</code> policy helper.
Transport	TLS 1.2+; HSTS max-age=31536000; includeSubDomains.
Browser hardening	X-Frame-Options: DENY, X-Content-Type-Options: nosniff, Referrer-Policy: strict-origin-when-cross-origin, Content Security Policy with frame-ancestors 'none'.
Payments	Stripe-managed. PCI scope reduced to standard SAQ-A. No card data touches Draw in the Air infrastructure.
Logging & telemetry	Sentry + PostHog with pseudonymous IDs only. CSP-violation events captured automatically.
Retention	12-month rolling retention on analytics events; parent-initiated deletion honoured within 30 days.
Incident response	Security disclosures: partnership@drawintheair.com . 48-hour acknowledgement SLA.

What schools get from a pilot

- A **screen-free** (no touch, no tap) early-years activity that runs on existing classroom hardware.
- A vendor with a **clean privacy story** at a moment when the NDPC is actively auditing the education sector (Feb 2026 compliance notice).
- A **measurement layer** that reports learning progress at the classroom level, never on individual children, with all groups under 5 suppressed.
- **Live transparency** — every metric we publish is queryable on a public /transparency page generated directly from production.
- **No software to install**. Works in Chrome, Edge, Safari and Firefox on existing devices.

Asks of the school

1. A classroom or learning-support room with one camera-enabled device and reliable internet (3Mbps sustained is enough).
2. A named contact for the pilot — typically the ICT lead or Head of Early Years.

3. A signed data-processing agreement before any child interacts with the platform.
4. A 30-day debrief at the end of pilot covering engagement, teacher feedback, and any safeguarding observations.
