

Draw in the Air

TEACHER GUIDE · PILOT EDITION

Your class, up and running in **four steps.**

Movement led learning your children control with their hands, using the webcam and screens your classroom already has. No child logins, no installs, no specialist kit.

★ **A friendly guide you can keep on your desk**

Inside: **getting set up · the four steps · what your children learn · the activities · staying safe**

HOW IT WORKS

Simple for you, magic for them

Children wave to begin, then use natural hand movements to draw, trace, pop, sort and solve. You guide the whole class from your screen, no touchscreens and no controllers.

WHAT YOU NEED

A webcam & screen

Any recent laptop or Chromebook with a webcam. A big screen or projector is lovely for the whole class.

A modern browser

Chrome, Edge, Firefox or Safari, kept up to date. Nothing to download or install.

A little space

Children stand about two metres back so the camera sees their hand. Good light helps a lot.

HOW CHILDREN CONTROL IT

Wave to begin

A friendly wave at the camera wakes things up and starts their session.

Pinch to choose

Finger and thumb together to draw, pop, select and drag. No touching the screen.

Open hand to pause

An open palm gently pauses, handy for a quick "eyes on me" moment.

Four steps to a flying start

1

Start a class

Open your teacher screen and start a class. A four digit **code** appears, ready to pop on the board.

2

Add your children & give each a picture

Tap the **Pictures** button. Add each child by name, then give them a picture, like Star, Flower, Moon or Sun. It saves for next time, too.

3

Tell each child their picture

Quietly say or show each child which picture is theirs. The full class list never appears on the children's screens.

4

Children tap their picture to join

They enter the code, tap their picture, and they are in, with no names to type, no passwords and no logins.

Star

Flower

Moon

Sun

You stay in control the whole time

Start, pause and end activities for the whole class from your screen. A live status shows you who is ready, who is playing and who might need a hand, so you can teach rather than troubleshoot.

What your children are building

Every wave, pinch and stroke is doing quiet, important work. For young children the body and the brain grow together, so moving to learn helps it stick.

Fine motor control

Pinching and tracing strengthen the small hand muscles used for holding a pencil.

Early writing

Forming letter shapes in the air builds the muscle memory for handwriting.

Early maths

Counting, matching and number games grow confident early number sense.

Sorting & thinking

Grouping, classifying and sequencing lay the roots of reasoning.

Attention & focus

One joyful task at a time helps children settle, look and stay with it.

Confidence & joy

Quick, visible wins give every child a success they can feel.

Built for the early years

The activities follow familiar early years and White Rose style sequences, with clear learning intentions and gentle, age appropriate progression for ages 3 to 7.

INSIDE THE APP

The activities at a glance

Bubble Pop

A gentle warm up for little hands.

Tracing

Follow the path, form letters and shapes.

Balloon Math

Pop the right number, early counting.

Sort & Place

Group and classify by colour and kind.

Colour Builder

Mix colours and notice what happens.

Rainbow Bridge

Match and sequence colours in order.

Spelling Stars

Phonics and first spelling, sound by sound.

Word Search

Spot letter patterns and words.

Free Paint

Open ended creativity, no wrong answers.

A LOVELY FIRST TEN MINUTES

1

2 MIN

Warm up

Start with Bubble Pop so every child gets a quick, happy win.

2

6 MIN

Learn

Move to one focus activity, such as Tracing or Balloon Math.

3

2 MIN

Celebrate

Finish with Free Paint, then end the class together.

SET UP FOR SUCCESS

Tips and good to know

Bright, even light

Face the window or a light, not away from it, so hands are easy to see.

About two metres back

Far enough that the camera sees the whole hand and a little movement.

One device each, or share

Works one child per device, or as a whole class turn taking activity on one screen.

Picture not matching?

Open **Pictures** and give that child a picture on the spot. They tap again and they are in.

GOOD TO KNOW

How long should a session be?

Short and sweet. Five to ten minutes of focused movement is plenty for ages 3 to 7, and you can run it as often as you like.

Can two children share one screen?

Yes. Take turns on one screen, or give each child a device. Both work beautifully, so use whatever suits your room.

What if a child finds it tricky?

Stand a step closer, check the light, and choose a large target activity like Bubble Pop to build confidence first.

Safe by design

Looking after children's data is built in from the start, not bolted on. Here is the short version you can share with families and leaders.

- ✓ **The webcam stays on the device.** The camera reads hand movement only. Video is never recorded or uploaded.
- ✓ **First name or nickname only.** No surnames, no birthdays and no contact details for children.
- ✓ **The class list stays private.** Children only ever see the pictures, never each other's names.
- ✓ **You are always in charge.** Remove a child's record any time, with anonymise or delete on request.

Designed around GDPR principles and UK children's privacy expectations.

Thank you for piloting with us

You are helping shape movement led learning for the early years. We would love to hear how your first class goes, and what your children make of it.
